Here's how to find us

Contact addresses
Just call to make an appointment and come on round. We look forward to seeing you.

Immerse yourself in a world of cosiness and well-being as you experience the wonderful feeling of a warm bath towel in a room that is at just the right temperature.

04

Energy efficiency without any loss of comfort

infraSWISS bath towel warmers radiate a marvelous feeling of cosy warmth, transforming your bathroom into an oasis of relaxation.

05

The bath towel warmer

Product

Not only do infraSWISS bath towel warmers heat up at lightning speed, they also make your bathroom warm and comfortable, bringing a real sense of cosiness. Whether in subtle colours or fashionable black, all have a superb timeless design. Thanks to their slim construction and the range of sizes available, they look good in any bathroom. The toughened glass front plate is not only elegant but easy to look after. Depending on the model chosen, several bath towel rails can be fitted - double or single bars, a rounded style or a modern angular form.

infraSWISS bath towel warmers are independent of the existing heating system. That is especially valuable in the spring or autumn, or on cool summer days when the central heating has not yet been switched on. The bath towel warmer keeps your bathroom at a pleasant temperature.

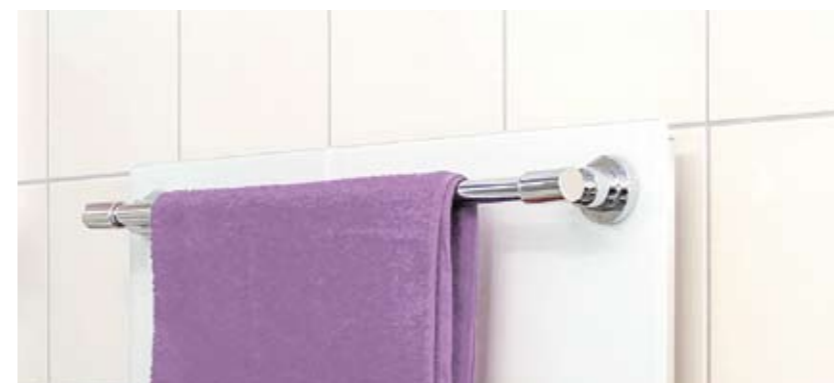

infraSWISS bath towel warmers can also be fitted in kitchens and utility rooms, whether in family houses or hotels.

Infrared warmth

The cosy warmth produced by infraSWISS bath towel warmers comes from infrared heaters. They do not just warm up the air, they heat up nearby objects. The warmth is transferred from these materials into the whole room with practically no losses, creating a beneficial, relaxing atmosphere for people and animals alike.

Swiss made

infraSWISS bath towel warmers are manufactured exclusively in Switzerland to the most demanding standards, using top class, high quality materials. They form a part of a comprehensive range of heaters.

Innovative technology that is sustainable

06

Sustainability

When it comes to sustainability, developing an innovative heating technology means finding a product that is both environmentally friendly and economic. Because the customer needs to know that he is acting responsibly with regard to nature.

The modern technology used in infraSWISS equipment has the lowest possible energy consumption. The lossless heat transfer and short response time guarantee that the earth's resources are used as carefully as possible.

Technology

Using the latest technology, infraSWISS bath towel warmers warm up very quickly and are extremely efficient. With a very low connected load, these bath towel warmers provide the best heat distribution available.

Quality

infraSWISS bath towel warmers create a level of comfort and well-being that you can really feel. No noise, dust, soot or CO₂ are produced. All models are guaranteed to operate reliably, and use energy efficiently. They are simple to operate and can be adjusted to meet individual requirements.

Advice

infraSWISS places value on good advice. Our staff undergo regular training and are well informed about all our products, including the latest ones. They would be pleased to meet you at your premises to discuss your needs, and help you select the right equipment.

Simple installation

infraSWISS bath towel warmers are simple to install, requiring no more than a 230 V electrical supply. A fixing kit for wall mounting is included.

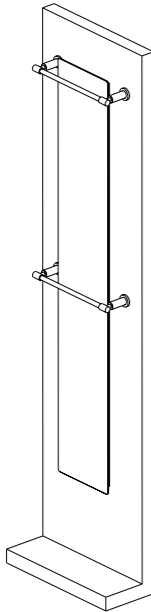

infraSWISS bath towel warmers have a superb timeless design and thanks to the range of sizes and shapes they can be easily installed in any bathroom.
